### Customer Problem Statement:

A well-articulated customer problem statement helps the team empathise with customers and understand how they perceive the product. The statements below describe the three kinds of users PocketSmart AI is built for.

| <b>Problem Statement (PS)</b> | <b>I am (Customer)</b>                                                     | <b>I'm trying to</b>                                                                           | <b>But</b>                                                                                                                | <b>Because</b>                                                                                      | <b>Which makes me feel</b>                                             |
|-------------------------------|----------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| PS-1                          | A home-owner or tenant furnishing and decorating my home.                  | Furnish each room (lights, fans, dining table, decor) within a fixed budget.                   | Prices, styles and quality vary so much across Amazon, Flipkart and IKEA that I cannot tell where my money is best spent. | No single tool splits my total budget across rooms and items and compares options across platforms. | Overwhelmed and anxious about overspending.                            |
| PS-2                          | An organiser planning a birthday, corporate event or wedding.              | Divide my budget across catering, decoration, entertainment and venue for a given guest count. | I end up guessing the split and checking Swiggy, Zomato and OYO listings one by one.                                      | Planning is manual and does not adapt to the event type or number of guests.                        | Stressed and unsure the event will stay within budget.                 |
| PS-3                          | A shopper looking for jewelry for a festival, wedding or special occasion. | Find jewelry that matches my outfit, occasion and budget.                                      | I cannot easily judge colour and style coordination while browsing many listings.                                         | Platforms do not consider my outfit or my overall budget when showing results.                      | Indecisive and worried about a poor purchase.                          |
| PS-4                          | A budget-conscious user who plans purchases several times a year.          | Revisit and reuse my earlier plans and recommendations.                                        | My earlier searches and plans are scattered across apps and tabs.                                                         | There is no saved history or personalised dashboard of my past budgets.                             | Frustrated at repeating the same work; confident once plans are saved. |
